

Step 1

Connect the SK75 keyboard in wired or 2.4GHz wireless mode, open the VIA configurator:

<https://usevia.app/>

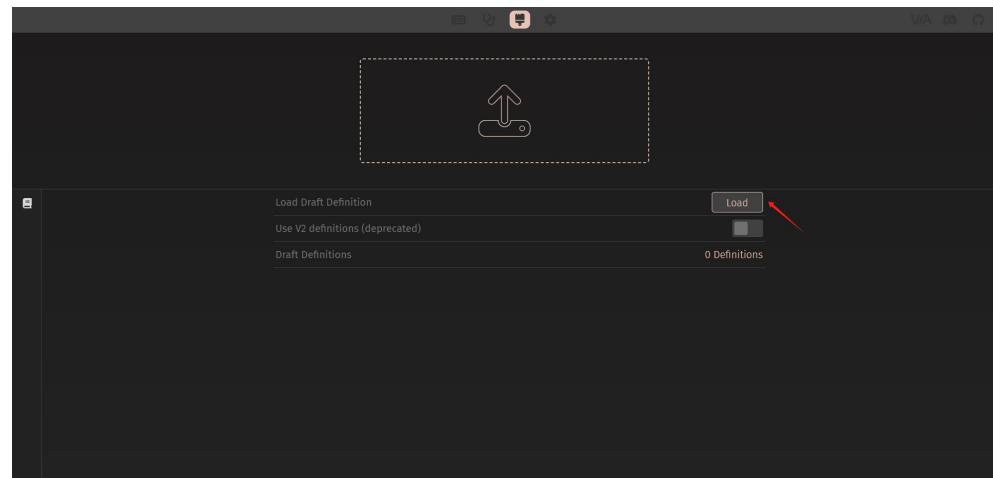

Switch on the “Show Design tab” on the Settings page.

Step 2

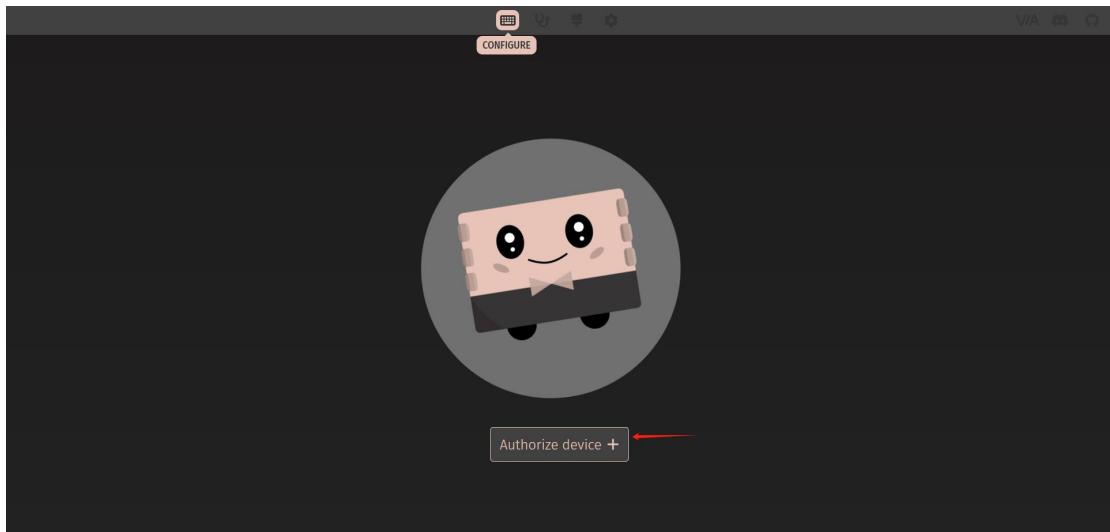

Click “Load” and choose the JSON file you downloaded from the first step.

Please make sure that you are uploading the corresponding file. When you use the keyboard in 2.4G mode, you should upload the SK75-2.4G.JSON file.

Step 3

Choose the keyboard on Configure page.

Step 4

Finished! Enjoy customizing your keyboard.

A screenshot of the QMK Configurator software. The top half shows a preview of a keyboard layout for an SK75 board, featuring a dark background with white and light blue key labels. The bottom half shows a grid of keys for customization, with a sidebar on the left containing tabs for 'BASIC', 'MEDIA', 'MACRO', 'LAYERS', 'SPECIAL', 'LIGHTING', and 'CUSTOM'. The 'BASIC' tab is selected. The customization grid includes keys for letters, numbers, symbols, and various function keys like F1-F12, Num Lock, Caps Lock, and navigation keys.
